Plzeň, 20.1.2015

Declaration regarding SVHC substances contained in products manufactured by REPLAST PRODUKT, spol. s r.o.

Products manufactured by REPLAST PRODUKT may contain Bis (2-ethylhexyl) phthalate (DEHP) which is included on the candidate list of SVHC* substances given on the ECHA** website.

This substance may be present in a concentration of 0 -5 % (detected by continuous tests).
Since the source material – crushed PVC cabling – comes from the EU where the PVC cabling producers have been switching to phthalate-free products, the level of Bis (2-ethylhexyl) phthalate contained is more likely to be at the lower limit.

If used as recommended, products manufactured by REPLAST PRODUKT pose no risk to human health and the environment because Bis (2-ethylhexyl) phthalate does not liberate from the product. No special measures for handling and using the products are therefore necessary.

This Declaration is provided in compliance with Article 33 of Regulation no. 1907/2006 (REACH***).
